

BRD Analysis - 2025-08-12

Okay, let's create a text-based flowchart representing the SimplyFi BRD process. Due to the limitations of text-based formatting, this will be a simplified representation. I'll use ASCII art and Markdown to structure it.

| Compliance |
+-----+

****Legend:****

* `+-----+` : Represents a process stage or system.

* `|` : Represents the flow of data or process steps.

* `V` : Represents the end of a process step. ****Notes:**** * This flowchart is a high-level representation. A more detailed flowchart would include specific system integrations (e.g., NSDL/CDSL integration), error handling, and data validation steps. * The decision points (represented by "Yes") indicate key decisions that need to be made during the process (e.g., determining whether a margin breach has occurred). Do you want me to elaborate on any specific aspect of this flowchart, such as: * Adding more detail to a particular process step? * Creating a flowchart for the "Automation of Third-Party Payment Working (TBML POST-FACTO RFI)" process based on the BRD summary you provided?
